

Call for 2026 Artpark Technology Innovators in Residence (TIR) Program

ARTPARK (AI & Robotics Technology Park) announces our **2026 Technology Innovators in Residence program**. We are looking for exceptional minds, ready to develop and deploy step-change innovations based on deep-research and advanced technologies with an aspiration to transform our country. We will support innovators who aim to create a deep tech business based on applying cutting edge advances in one or more of AI, Robotics, Novel Materials, Sensors & Actuators, Communication & Computing Technologies, Mechatronics Systems, Manufacturing Systems & Processes, and any other technologies related to autonomous/human-assisted cyber-physical systems, to solve critical problems in various sectors like (but not limited to), manufacturing, space, health, agriculture, and defense. We specifically encourage expert technologists and researchers who want to translate advanced, laboratory proven research, into robust technologies leading to products with a global impact.

Programme Structure & Tenure

We expect the incoming innovators to have access to their key USP IPs/Technologies at a minimum Technology Readiness Level of 3 (in-house/laboratory validated) and over the course of this residency, will mature it to TRL 4 (demonstration/validation in Artpark facilities, along with identification of product-market-fit, potential customers and use cases). We encourage innovators to apply in teams of up to 3 founding members - with complementary skills/roles to ensure a high chance of success.

1. **Duration:** Up to 12 months. In certain exceptional cases, we might extend by up to one more year, depending on progress, degree of difficulty of the project, importance/potential etc.
2. **Funding:** Funding of up to 1Cr/yr (based on detailed budget estimates) linked to quarterly milestones and progress. Periodic reviews will be performed by Artpark's TIR Management team to mentor, assist and evaluate progress. Funding will be managed from within Artpark's system.
3. **IP:** Any prior IP before the start of the project, will belong to the original owners. Any new IP that is created during the course of the project, will belong to Artpark - but will get exclusively licensed/transferred to the innovators if they create their own company to commercialize it. The detailed terms and conditions will be discussed separately
4. **Location:** Artpark. We expect the innovation team's full-time commitment to the project. If they are affiliated with another organization and want to maintain it during this program - they need to get a No-Objection Certificate or equivalent permission from their parent organization to devote full-time to this activity.
5. **Mentorship:** Artpark innovation team will put in best efforts to provide scientific, technological and business development mentorship, as needed, through their extensive roster of academic, industry, entrepreneurial and investor experts.

6. **Collaboration:** We strongly encourage collaboration with any other legally incorporated institution - like academia, industrial research labs, government research labs, industries etc.. especially if any complementary IPs can be used to accelerate the project.
7. **Progression:** High-performing TIRs will have an opportunity to get follow-on equity investment along with incubation for their startup under Artpark's incubation program.

Who can apply?

The program is open to high-caliber technologists/Scientists/Researchers/Engineers who possess the grit for tackling challenging technical problems and a passion for real-world deployment to solve customer use cases. Specifically, this residency is designed for:

- **Deep-Tech Researchers/Scientists** who want to translate their research/academic IP into scalable, functional prototypes with an aim to create products for commercialization.
- **Systems/Domain Technologists or Technopreneurs:** with deep engineering and/or domain experience in key technologies and/or domain verticals and who have rich experience in building complex products/physical-digital systems.

About ARTPARK & The Mission

Promoted by the Indian Institute of Science (IISc) Bengaluru, and funded by the Department of Science and Technology (DST), Government of India, along with the Government of Karnataka, ARTPARK is a first-of-its-kind, not-for-profit foundation committed to nurturing and accelerating deep-tech, step-change innovations based on deep research and advanced tech, especially from the domains of Artificial Intelligence, Robotics and Autonomous Systems. We love **hardware and manufacturing** and we especially encourage applicants and ideas which will further India's Manufacturing prowess.

Our overarching goal is to support innovation talent that can harness these cutting-edge technologies to solve pressing strategic and societal problems in the country, while fostering a collaborative ecosystem that synergizes academia, industry, and venture capitalists with our technology innovators.

We have incubated 34 companies since our inception in 2020, with a cumulative valuation of more than 1300Crores. A detailed roster of our companies is available on our website. Many of these startups started as a TIR project and matured into a startup.

Selection Process & Timeline

Our evaluation process is designed to thoroughly identify technical viability and deployment potential.

Application deadline: May 22 2026, 5pm IST.

Selection Notification for interview (tentative): June 22 2026

Interviews (tentative): July 1st week, 2026

Residency Commencement: July 15 2026.

Pre-Application Events

- **April 20, 2026:** Applications Open
- **April 27, 2026 (Monday, 6:00 PM):** *Workshop 1: Demystifying the TIR Process & Use Cases (Session 1)*
- **May 4, 2026 (Monday, 6:00 PM):** *Workshop 2: Demystifying the TIR Process & Use Cases (Session 2)*
- **May 8, 2026 (Friday, 6:00 PM):** *Workshop 3: Journey of an Innovator (AMA with a current TIR)*

How to apply?

Please use this online link [\[\]](#) to upload your application.

[Link to Application/Inquiry Form]

Important: No email submissions. No submissions via social media or third parties. Applications must be complete at the time of submission. ARTPARK reserves the right to close a review cycle early if the cohort is filled.
